## About me

I'm Mohamad, a web developer with two years of experience working with JavaScript. My expertise lies in powerful frameworks like React.js and Next.js. So far, I've built various websites with different challenges, and I'm always ready to take on new ones to grow my skills even further.

---

## Skills

- **Programming Languages** : JavaScript , TypeScript
- **Frontend Frameworks** : React.js , Next.js
- **State Management** : Redux , Zustand
- **Styling** : HTML , CSS , Tailwind CSS , Material UI , Hero UI
- **Tools** : Git , Vite , ESLint , Axios , Storybook , Nx Monorepo , Fomrik , Yup
- **testing** : Jest

## Projects

### WindyTail(My Startup)

2025

Developed with :

JavaScript , Next.js 15 , Tailwind 4

A simple, minimal, and practical platform for all programmers who don't want to spend extra time and energy building every button and form or installing a heavy library. They can just come to the website, copy any component they want, and use it.

### Sabznevis (Blogging website)

2024-2025

Developed with :

TypeScript , Next.js , Tailwind , Redux , Tiptap

An advanced blogging website with features like SMS user authentication and cloud image storage. I spent two months full-stacking it to perfect the details and make it more than just a portfolio. The main challenge was building a professional text editor that supports rich formatting, image uploads, and auto-saves the user's post as they type.

### SetCoffee (Store website)

2024

Developed with :

JavaScript , Next.js 15 , Tailwind 4 , material UI

A professional e-commerce web application with both user and admin panels. Features include SMS authentication, cart and wishlist management, review and rating submission, ticketing system, and product image uploads to cloud storage. The admin panel provides full management of products, tickets, reviews, and user messages.

### Evava (Real estate website)

2024

Developed with :

JavaScript , Next.js 15 , Tailwind CSS , Hero UI

This project is a full-stack application built with Next.js and Tailwind CSS, developed using Next UI. The main focus was on implementing a complete frontend and backend along with secure authentication based on a 30-second refresh token. Key features include an admin panel, adding houses with images, profile photo uploads, dark mode design, advanced search with filters, cloud storage with ImageKit, and the ability to save houses.
